

Institutional Distinctiveness

The college unit of NSS is active for the constraining of plastic pollution. They regularly organize drives to prevent the use of plastic in the college campus. With the help of students the NSS unit organizes camps not only in college but also in the surrounding areas. It also organizes lectures, and awareness rallies for making the students aware how the plastic usage endangers the environment. The college administration also contributes by restricting the sale of plastic bottles and other stuff, in various camps and rallies the students pledged themselves to minimize the use of plastic and to help in the prevention of its use by others as well. These drives have met with great success as the college campus is heading towards a more greener and plastic free zone. Similarly the practice of plantation of tree has also achieved huge success, one of the evidence being supply of plants by the Forest Department since 2012. Waste baskets and trash bins have been placed at every nook and corner of the college for maintaining hygienic conditions. Swimming pool is also regularly cleaned to maintain a healthy environment. The college intends the installation of a solar power system of 30 KW capacities to tap this renewable source of energy and to reduce the carbon footprints. The College through its NSS NCC units plant a large number of trees on the campus as well as at the adopted sites during regular camps and the local people are motivated to take care of these plants and protect them. This also helps to create a sense of belongingness among the younger generation and their concerns for a clean environment. Tree plantation is a regular feature of the college to maintain the ecosystem. They have planted a variety of trees in the college, which have contributed to the beauty and greenery of the campus besides effecting carbon neutrality in the campus fulfilling the motto “one person one tree”- if this mission and message can get through, India can regain its lost grandeur in Nature’s grand show. Plantation of trees is one of the most altruistic of actions. One generation plants them and the second or third reaps its fruits so the planting of trees is a divinely altruistic gesture.
